

SIU INVESTIGATION NOTES

Prepared by SIU Investigator — Ref. Fraud Case FC023

Fraud Case ID:	FC023
Related Claim:	CLM116
Investigator:	SIU007
Notes Date:	December 22, 2025

Findings

Upon deeper review beyond the initial referral, this case shows two indicators the original adjuster's referral did not flag: the claimant's stated timeline of events does not match the sequence implied by the submitted documentation, and the loss location listed on the claim falls within a zone with an elevated historical rate of similar claims.

The mismatched documentation the adjuster described as “minor paperwork” specifically involves a repair invoice dated eight days before the claimant's stated date of loss.

Investigator's Assessment

This case was initially characterized as low concern, but the combination of an inconsistent timeline, a documentation date that precedes the reported loss, and a high-risk-geography signal warrants a closer review than the original referral suggested. Recommend escalating investigation priority before closure.
